

Microsoft 365

Upgrade from Office 365 to get the security, productivity and ROI you need

Didn't know there was a difference between Office 365 and Microsoft 365? You're not alone. But rest assured, if you like the simplicity that Office 365 offers, you'll love Microsoft 365, especially the peace of mind it gives you.

\$3.8million

Is the average cost of a data breach. The new Microsoft 365 offers improved security.

Source: microsoft.com

Why you should upgrade to the new Microsoft 365

Put simply, because it wraps a layer of security around your Office 365 set up, has device management, multi-factor authentication, and a whole lot more.

The new Microsoft 365 is the real deal. It's a single piece of software, meaning it's easier

to install and maintain; it enables better protection for your environment (even with BYODs); and it's scalable, so you only pay for what you need.

Our bespoke Customer Immersion Experience sessions can show you exactly what an upgrade to Microsoft could do for your business.

Improved Cyber Security

Manage and monitor security via the new dashboard across your identities, data, devices, apps, and infrastructure. Conditional access and MFA are the big guns here.

Easy Device Management

Easily deploy and manage laptops, mobiles and tablets across your network with Intune. Managing multiple devices per person is a breeze.

Better Return On Investment (ROI)

Let our experience architects custom design a Microsoft 365 solution for you, and benefit from added features, improved productivity and licensing selection.

Customer Immersion Experience (CIE)

Our CIE demonstrates, in real time, exactly how your business will benefit. We will show you how to unleash the true power of Microsoft 365.

The Missing Link is our go-to team for everything Microsoft related. With their support, we feel that we have the best protection for our business and can see how our employees are working better together and when working remotely now that we have the right solution in place. I've recommended The Missing Link in the past and will continue to do so in the future.

Kristi Conacher | Director, Treysta Wealth Management Pty Ltd

Why choose The Missing Link to manage your Microsoft 365 experience

Our award-winning security specialists are experts in their field, with extensive knowledge and understanding of all aspects of ICT security, they are some of the most highly certified specialists in Australia.

We focus on increasing visibility, minimising risks and providing secure solutions that are tailored to your organisation.

We are a CREST approved organisation, ensuring we have a professional and ethical approach to information security testing.

Here at The Missing Link, we work hard to ensure our customers are protected from cyber security threats. We can help assess which Microsoft 365 licence best suits your needs.

Ask us about:

Multi factor authentication (MFA): Verify the identity of your system users via multiple credential checks to add a layer of security to your data.

Microsoft Intune: A cloud-based service that helps protect your corporate data across all device types without sacrificing productivity.

Conditional access: Allowing you to control the devices and apps that are permitted to connect to your email and company resources.

Licensing selection: Our experts are here to ensure you choose the right license for your business, keeping you secure & ensuring you don't pay too much.
